According to the analytical data that I have this Frac Tank (No ID) and FT #215006 were never sampled. However, were full and contained skim oil generated by the wastewater treatment system. More than likely anything that contained what appeared to be hydrocarbon was removed when the two (2) transport tankers (Full of Waste), one (1) vacuum box (Full of Waste) and the seven (7) rollofs were removed from the site. None of this is a surprise me!!!

Gary,

Look at the attachment and inform me as to if I have ID the right FT.

Mickey:

The frac tank that I am referring to is located on the northwest side of the facility. In fact, it is near the southern end of the operations building by the drum storage area and the vat with oil in it.

Thanks

All of the Frac Tanks located on the east side of the AST's secondary containment were full the last time we checked them.

Mickey:

While out on site on 8/7/14, I noticed that the hatch on the end of the Frac Tank South of FT215005 (FT with No ID) was open. I looked into the FT and noticed it was virtually empty. Can you tell me anything about this?

Thanks
